

Weekly Report of January 4th 2017

Executive Summary

The current S/T top signal will likely merge with a M/T top signal over coming weeks as **a stock market cycle-LOW should print in March/April**. Do not sell right now but definitely do not chase the highs; **just hold on for now. Be prepared to next move which will be a sell/reducing ahead of the March/April cycle-low.**

More details to come in the 2017 Outlook – to be released by mid-January.

Due to the approaching of **2018 hellish year**, and therefore **much crazier volatility**, current long-term projections are judged useless. **All financial asset prices will turn upside down** – likely to start nauseatingly **after** mid-2017 but definitely throughout 2018, and very likely to extend into 2019 as well.

We are fortunately getting increasing visibility that **an amazing positive secular upturning setup is located around year 2020 (+/- 1)** which will thereafter propel both commodities and equities. If free trading still exists then, **stock markets have capability to achieve next secular topping around years 2030/2035** whilst **commodities will soar into years 2023-2025**.

US dollar should dominate as the most wanted international currency into 2018 World Currency Crisis but technicals do not confirm so far; **we need some more weeks to confirm or negate the USD on-going positive trend.** Bitcoin will fly toward \$1300+

Precious metals & mining companies may have formed their expected cycle-low in December/January. Gold is on accumulation but we wait some more time on silver; we added small size of mining companies. **2016 & 2017 is accumulation/waking up. Rocket mode in 2018 & 2019 and possibly again around 2023.**

Brent has some more upside potential into 2017 toward upper range of \$65/\$75. CRB Index is on very slow motion price strengthening. But **peak oil is behind us as ecological master cycle has started from 2014/15.**

Agriculture prices – as well as many food prices - are basing in 2016/2017 before soaring +50% to +100% into 2018. Copper, nickel, zinc, natural gas... shot sharply up but it is too early for prime time. Many commodities are in slow motion W-shaped secular bottoming process 2016-2019. **We strongly foresee the onset of a global commodity price increase over coming years and likely the very early stages of next big reflationary wave beyond 2018. 2018 to 2024 will be THE very strong positive time for commodities!**

VIX and VSTX Volatilities are subdued for time being but will wake up from mid-2017 and **indomitable overall nervousness is expected 2018 & 2019.** Possibly echoing 2022/2023.

US High Yield Debt and USD Emerging Debt Indexes produced a major upturn in February 2016. **We are cautious on emerging debt due to rising USD against emerging currencies.**

Recent impressive rally on US Tsy & German Bund long bond yields is only seen as part of the global W-shaped secular upturning process 2015-2018. Current overextension will cool down soon but overall secular upturning process is slowly in the making – led by US Treasury Bonds.

2008-2024 is kind of major societal change that happens once every 100-300 years. 2015-2020 will concentrate maximum financial pain/shock – especially centred on 2017-2019. 2020-2024 will play as joker/stabilizer. There is significant eventuality for a Ctrl-Alt-Delete-Reset process within 2017-2024 time band. Confidence plays major role. World economy will worsen into 2019/2021 cycle-trough. Western Socialism will fail and collapse by 2040. This is a governance crash! Flee public assets and rush into private & hard assets. Maximum confrontation government versus people. Fight for democracy & against nationalism. Adapt to robotics revolution. Many resemblances with Roman Empire demise. Asia will lead world economy from 2035. Europe/EUR could break apart by 2024. The 2 worst times appear to be around 2018 & around 2023.

Source: CNN Money. Index ranges usually from 5-10 (extreme fear=buying zone) to 90-95 (extreme greed=selling zone)

STOCK MARKETS

S&P500	Symbol: .SPX	Last daily close: 2257.83	Visibility
Time Horizon	Outlook/Forecast		Visibility
Medium-Term <6M	2275 has been reached in Dec! Now on imminent S/T correction		Average
Long-Term 6M-2Y	An irrational & frenzy advance toward 2600/3200 major top into 2018 has been launched from September. In case of failure: decline through Nov/Dec 2017. Cyclical top in 2018.		Average
Secular Trend >2Y	Secular bottom was printed in 2009 (same than 1932/1942 and 1974 ones) Bear-market somewhere in between 2018 and 2020 (potentially severe). Next secular top around years 2030/2035.		Highest Average Good
Critical Level	Critical support level is 2128 on a January closing basis		

Our interpretation: QE to infinity + loss of confidence in governments (collapse of socialism) + tech boom = shift from public assets to **private assets** & hard assets. Reflation game about to add fuel in coming years. These elements should feed the secular uptrend through 2030/2035 when China will handle world economic leadership.

Current main signal: positive. At risk of technical failure October to January. Must reach minimum 2275 by year-end.

Our decision: we bought late Sept around 2160 for an advance toward 2600/3200 into 2018.

Failure, Stop-Loss: a prolonged price action below 2128 could trigger a sell signal, especially if 2026 (Q1 level) is rapidly penetrated afterwards.

Target, Profit-Taking: on sell signal, from 2600 minimum up to 3200 in case of panic buying, likely in H1 2018.

If you start today: hold on for now; do not add/buy; prepare to reduce/sell.

NASDAQ Composite		
Symbol: .IXIC	Last daily close: 5429.08	
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	5510 has been hit in December. Now S/T correction about to unfold anytime	average
Long-Term 6M-2Y	An irrational & frenzy leg-up toward major top into 2018 has been launched from September. In case of failure: decline through Nov/Dec 2017 Cyclical top in 2018.	Good Average
Secular Trend >2Y	Bear-market somewhere in between 2018 and 2020. Next secular top in 2030/2035.	Average Good
Critical Level	Critical support level is 5101 on a January closing basis	

Current main signal: positive. Challenged October to January. Must reach 5510 by end of Dec.

Our decision: we bought late-Sep around 5305 for an advance into 2018.

Failure, Stop-Loss: a prolonged price action below 5101 could trigger a sell signal, especially if 4766 (Q1 level) is rapidly penetrated.

Target, Profit-Taking: on sell signal, from 6300 minimum up to 8500 in case of panic buying, H2 2017 to H1 2018.

If you start today: hold for now, do not buy/add; prepare to reduce/sell.

NASDAQ Biotech		
Symbol: .NBI	Last daily close: 2828.20	
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	Challenged by 2927 critical resistance. On testing for 6 th month in a row	Average
Long-Term 6M-2Y	Once 2927 resistance is firmly cleared, will retest previous high by 2018. In case of failure: decline through Nov/Dec 2017	Low Average
Secular Trend >2Y	Bear-market somewhere in between 2018 and 2020. Next secular top in 2030/2035 in sync with broad market?	Average Low
Critical Level	Critical resistance level is 2927 on a January closing basis.	

Current main signal: moderately positive. On testing of 2927 resistance. Technical failure = down-move till Nov2017.

Our decision: we bought some late-Sep around 3080 for an advance into 2018. Not a core holding.

Failure, Stop-Loss: inability to recover above 2927 will be suspicious; a quarterly closing below 2887 (Q1 level) could trigger a sell signal. Q4 2016 closing below 2853 hasn't produced enough damageable incidence.

Target, Profit-Taking: on sell signal, from 3850 minimum, ideally around 4300, or up to 4700+ in case of panic buying, H2 2017 to H1 2018.

If you start today: buy small size on weakness and hold till target.

Russell 2000		
Symbol: .RUT	Last daily close: 1365.49	
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	Overbought. S/T correction imminent.	Average
Long-Term 6M-2Y	An irrational & frenzy up-leg toward major top into 2018 has been launched. In case of failure: down-leg into Nov/Dec 2016. Cyclical top in 2018.	Average High Average
Secular Trend >2Y	Bear-market somewhere in between 2018 and 2020. Next secular top in 2030/2035.	Average Good
Critical Level	Critical support level is 1217 on a January closing basis	

Current main signal: positive.

Our decision: we bought Late-Sep around 1245 for an advance into 2018.

Failure, Stop-Loss: a prolonged price action below 1217 could trigger a sell signal, especially if Q1 closes below 1189.

Target, Profit-Taking: on sell signal, from 1445 minimum up to 1650 in case of panic buying, H2 2017 to H1 2018.

If you start today: hold for now; do not buy/add; prepare to reduce/sell.

Philadelphia Housing		
Symbol: .HGX	Last daily close: 239.73	
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	234 critical pivotal still on testing. Lack of upward pressures	Low
Long-Term 6M-2Y	A moderate advance toward major top into 2018 has been launched. In case of failure: decline through Nov/Dec 2017. Cyclical top in H2 2017/H1 2018.	Low Average
Secular Trend >2Y	Upside is limited into 2017/2018 at 260/300. Bear-market somewhere in between 2018 and 2020. Next secular top in 2030/2035 in sync with broad market?	High Average Low
Critical Level	Critical pivotal/support level is 234 on a January closing basis.	

Current main signal: moderately positive. *Upside is limited.*

Our decision: we bought late-Sep around 239 for an advance into 2018. *We prefer the other US leading markets.*

Failure, Stop-Loss: a prolonged price action below 234 could trigger a sell signal, especially if Q1 closes below 221.

Target, Profit-Taking: on sell signal, from a minimum of 265 up to 300 maximum, H2 2017 to H1 2018.

If you start today: hold for now; do not add/buy; prepare to reduce/sell

Volatility US Markets		
Symbol: .VIX	Last daily close: 12.76	
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	About to spike in January & March/April	High
Long-Term 6M-2Y	VIX will go through the roof after H2 2017 and will remain very high 2018 to 2019.	High
Secular Trend >2Y	VIX will remain very high 2018 to 2019. No visibility beyond 2019/2020.	Good None
Critical Level	Critical pivotal/resistance level is 15.70 on a Q1 closing basis	

Our interpretation: a bear market will likely develop after next major topping in 2017/2018. One adds the worst of political uncertainties to be reached by 2020 & war cycle peaking in 2018/2019 & currency crisis from 2018.

High volatility on ALL asset classes 2018 to 2019: NOWHERE TO HIDE!

Current main signal: Neutral.

Our intention: for time being we use VIX only as a market gauge. We may however buy from H2 2017.

Failure, Stop-Loss: we observe the technical setup around 15.70, currently neutral.

Target, Profit-Taking: a cyclical high will be printed in between 2018 and 2020.

If you start today: no hurry, only short-term reactions for now; VIX will be on sustained rise only after mid-2017.

Volatility EU Markets		
Symbol: .VSTX90	Last daily close: 20.57	
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	About to spike in January & March/April	High
Long-Term 6M-2Y	VSTX will go through the roof from H2 2017 and will remain very high in 2018 and likely also in 2019.	High
Secular Trend >2Y	VIX will remain very high 2018 to 2019. No good visibility beyond 2019/2020 but may echo in 2022/2023	Good None
Critical Level	Critical pivotal level is 22.92 on a Q1 closing basis	

Current main signal: Neutral.

Our intention: for time being we use VSTX only as a market gauge. We may however buy from H2 2017.

Failure, Stop-Loss: we observe the technical setup around 22.92, currently more or less neutral.

Target, Profit-Taking: a cyclical high will be printed between 2018 and 2020.

If you start today: no hurry, only short-term reactions for now; VSTX will be on sustained rise only after mid-2017.

DJ Stoxx 600 Europe		
Symbol: .STOXX	Last daily close: 365.71	
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	Thrust above 347 was encouraging. Consolidation will unfold soon.	Average
Long-Term 6M-2Y	A limited advance toward major top into 2018 has been launched. Cap is 395-425. In case of failure: decline through Nov/Dec 2017. Cyclical top in 2018.	Average
Secular Trend >2Y	Bear-market somewhere in between 2018 and 2020. Next secular top in 2030/2035.	Average Good
Critical Level	Critical support level is 348 on a January closing basis	

Current main signal: moderately positive. **Improvement** as 347 resistance has been defeated.

Our decision: we bought around 343 and **we will soon add** (January?) for an advance into 2018.

Failure, Stop-Loss: a Q1 closing below 346 and inability to hold above 348 could trigger a sell signal.

Target, Profit-Taking: on sell signal, up to 395-425 maximum, in 2018.

If you start today: hold for now; do not add/buy; prepare to reduce/sell.

Swiss Market Index		
Symbol: .SSMI	Last daily close: 8316.18	
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	improvement as 8184 resistance is about to give way but 8343 still stands in	Average
Long-Term 6M-2Y	A limited advance toward major top into 2018 has been launched from September. In case of failure: decline through Nov/Dec 2017. Cyclical top in 2018.	Average
Secular Trend >2Y	Bear-market somewhere in between 2018 and 2020. Next secular top in 2030/2035.	Average Good
Critical Level	Critical support/pivotal level is 8184 on a January closing basis	

Current main signal: moderately positive. **At risk of technical failure if 8343 resistance holds over near-term**

Our decision: we bought some at 8230 and will add (in January?) for an advance into 2018.

Failure, Stop-Loss: inability to recover and hold above 8343 could turn main signal to neutral.

Target, Profit-Taking: on sell signal, up to 9800 cap, H2 2017 to H1 2018.

If you start today: hold for now; do not add/buy; prepare to sell/reduce.

Hang-Seng Index		
Symbol: .HSI	Last daily close: 22150.40	
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	Significant leg-up has been launched from June's low	Average
Long-Term 6M-2Y	An irrational & frenzy leg-up toward major top into H2 2017 to H1 2018 has been launched from June's cycle-trough. Cyclical top in H2 2017/H1 2018	Good Average
Secular Trend >2Y	Bear-market somewhere in between 2018 and 2020. Next secular top around years 2032/2037.	Average Good
Critical Level	Critical support level is 21887 on a January closing basis; now on testing	

Current main signal: Positive since June 2016. But main signal currently challenged by testing of critical support

Our decision: we bought in August around 22500.

Failure, Stop-Loss: a prolonged price action below 21887 could trigger a sell signal. More importantly, a yearly closing below 20384 could derail the on-going secular uptrend that has been intact since 1964.

Target, Profit-Taking: on sell signal, from 27000, by 2018.

If you start today: buy small size now and hold on till target.

NIKKEI 225		
Time Horizon	Outlook/Forecast	Visibility
Symbol: .N225 Last daily close: 19114.37		
Medium-Term <6M	Up-leg from September cycle-low	Average
Long-Term 6M-2Y	An irrational & frenzy advance toward major top into H2 2017 to H1 2018 is on launching. Cyclical top currently projected in 2018.	Good Average
Secular Trend >2Y	Secular bottom was printed in 2008/2009. Bear-market somewhere in between 2018 and 2020. Next secular top in 2030/2035.	High Average Low
Critical Level	Critical support level is 17660 on a January closing basis	

Current main signal: positive.

Our decision: we bought some late-Sep at 16600 and added from 17461.

Failure, Stop-Loss: inability to hold above 17660 and a quarterly closing below 17104 could trigger a sell signal.

Target, Profit-Taking: cyclical top will be capped around 21500-22000 area into 2017/2018.

If you start today: hold for now; do not add/buy; prepare to reduce/sell.

Shanghai Composite		
Time Horizon	Outlook/Forecast	Visibility
Symbol: .SSEC Last daily close: 3135.92		
Medium-Term <6M	On the razor-edge as price oscillates between 3079 and 3142	Average
Long-Term 6M-2Y	Uncertain price development throughout 2017/2018 as secular bottoming is expected only around 2020 +/- 1 year. Cyclical top in H2 2017/H1 2018	Low Average
Secular Trend >2Y	Secular bottom around 2020 +/- 1 year Bear-market somewhere in between 2018 and 2020. Next secular top in 2032/2037.	High Average Low
Critical Level	Critical support level is 3079 on a January closing basis.	

Current main signal: Moderately positive over medium-term. Negative into 2020.

Our decision: we bought around 3025. However not a core long-term holding before year 2020.

Failure, Stop-Loss: stop-loss is set at 2890.

Target, Profit-Taking: 3435 is intermediate peak in 2017 (may be up to 3900 in 2018); 2400-2500 zone will be secular bottoming area in 2020.

If you start today: hold for now and hold on till target.

iShares MSCI Emerging		
Time Horizon	Outlook/Forecast	Visibility
Symbol: EEM Last daily close: 35.43		
Medium-Term <6M	Jan/Feb 2016 was major bottom. Challenged/repelled by 37.35 resistance.	Average
Long-Term 6M-2Y	Major advance into 2017/2018. Cyclical top expected in H2 2017 to H1 2018.	Low Average
Secular Trend >2Y	Bear-market somewhere in between 2018 and 2020. Next secular top in 2032/2037?	Good Low
Critical Level	Critical support level is 34.93 on a January closing basis. Now on testing.	

Current main signal: positive. Price however needs to recover shortly above 37.35. Signal at risk of failure.

Our decision: we bought late September around 37.50 for an advance toward 45-47 into H2 2017/H1 2018.

Failure, Stop-Loss: inability to settle above 37.35 or prolonged price action below 34.93 could trigger a sell signal.

Target, Profit-Taking: major top will form around 45-47 in 2017/2018.

If you start today: hold for now; prepare to reduce/sell. ETF Tracker ILF (Latin America) follows same path.

COMMODITIES

Gold ounce spot \$	Symbol: XAU=	Last daily close: \$1158.82
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	A temporary low could have formed at \$1122 in December; now on S/T bounce	Average
Long-Term 6M-2Y	Major buying opportunity in 2017! rocket mode from 2018 or 2019 (\$2000+).	High
Secular Trend >2Y	Next secular topping projected around 2023, or within 2020 to 2024 time range	High
Critical Level	Critical resistance level is \$1220 on a January closing basis.	

Our interpretation: Gold is THE hedge against political uncertainties and misgovernance. The more politicians will fail, the more gold will rise. Will get a boost thanks to 2018+ world currency crisis. Best time is only after mid-2017.

Current main signal: **neutral; sharp slingshot move from 2017 low!**

Our decision: **we add small size** to our L/T buy-and-hold position. Sizeable position only after mid-2017.

Failure, Stop-Loss: inability to recover and hold above \$1220 by March will reopen retest of \$1100-\$1140 area

Target, Profit-Taking: from **\$2500** and very likely much above, 2020 to 2024.

If you start today: **add/buy small size on any weakness; big size position will be built only after mid-2017**

Silver ounce spot \$	Symbol: XAG=	Last daily close: \$16.27
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	A temporary low could have formed at \$15.59 in December.	Average
Long-Term 6M-2Y	Major buying opportunity in 2017; rocket mode from 2018 or 2019 (\$60+).	High
Secular Trend >2Y	Next secular topping will be located within 2020 to 2024 time band	High
Critical Level	Critical pivotal level is \$16.85 on a January closing basis. Now on testing	

Current main signal: Positive since December 2015. About to turn neutral if **\$16.85** support fails over short-term

Our intention: **we may soon start buying small sized position. Full size position likely in H2.**

Failure, Stop-Loss: failure to hold **\$16.50** area will open **\$14**.

Target, Profit-Taking: from **\$59+** and likely much above, 2020 to 2024.

If you start today: **prepare to add/buy small size. Silver will strongly outperform gold from H2 2017 on.**

Phila Gold Silver Index	Symbol: .XAU	Last daily close: 82.01
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	a low may have printed Nov-Dec around 73-78; now on S/T rebound	Average
Long-Term 6M-2Y	Secular bottoming formed in the autumn of 2015. No clear price target beyond 2018 as price will go ballistic	Highest Average
Secular Trend >2Y	On a multi-fold price advance into 2020-2024	Highest
Critical Level	Critical support level is 79.48 on a January closing basis. Now on testing !	

Current main signal: positive since September 2015. **A temporary low may have formed Nov-Dec 2016 around 73-78.**

Our decision: we started accumulating long-term buy-and-hold position from September of 2015 around 44 and reduced from 65 and above. **We added small size within 73-78 range and will add again later in 2017.**

Failure, Stop-Loss: a decline below **74** would appear suspicious and lead to further downside.

Target, Profit-Taking: ultimate top is a multi-fold advance into 2020-2024. Price projection is very approx (250+).

If you start today: **accumulate** a moderate buy-and-hold position in January, within **74-79** ideal buying range.

Gold/Silver ratio (70.97): this ratio is used as a **confirmation** of new major uptrend in precious metals as we got a major sell signal in March 2016. **Downtrend not yet fully confirmed** as price went back above **70.53** (Q1 pivotal level); critical **resistance** is at **72.68 in January**. Target is 50-55 into H2 2017.

Rare Earth Metals		Symbol: .MVREMX	Last daily close: 287.15
Time Horizon	Outlook/Forecast		Visibility
Medium-Term <6M	Defeating of critical 267 resistance is still working out		Average
Long-Term 6M-2Y	Major/secular bottom formed in January. Will launch a major advance when 267 is clearly defeated. Slow motion price action = very good secular bottoming		High
Secular Trend >2Y	Multi-fold price rise into 2022-2024.		High
Critical Level	Critical support/pivotal level is 267 on a January closing basis; still on testing		

Our interpretation: QE to infinity + loss of confidence in governments (collapse of socialism) + tech boom = shift from public assets to private assets & **hard assets**. Reflation game about to add fuel in coming years. One adds the need of metals for technologies and renewable energies + Asian boom beyond 2020.

Current main signal: Moderately positive. About to soon turn positive when 267 will clearly give way. **Real bull trend will develop after 2018/2019. Not for trading activity. Long-term buy and hold, sit tight.**

Our decision: we bought around 256 in April and we will add soon on lower side. L/T holding.

Failure, Stop-Loss: a prolonged price action below 267 could leave the sector index into prolonged lateral W-shaped bottoming process.

Targets, Profit-Taking: 375-400 into 2017/2018; then 935-1110 into 2020-2024 if 410 is passed by 2018.

If you start today: buy a moderate L/T buy-and-hold position and prepare to add on lower side, on our signal. This is multi-year price development but with high volatility.

Copper HG Future		Symbol: HGc1	Last daily close: \$2.4810
Time Horizon	Outlook/Forecast		Visibility
Medium-Term <6M	Now on consolidation as capped by \$2.65, then uptrend will resume		Good
Long-Term 6M-2Y	Intermediate peak will form in 2017/2018 then down into secular bottom.		Average
Secular Trend >2Y	Secular double-bottom will form 2016/2019, then sharply up beyond 2019/2020		High
Critical Level	Critical support level is 2.27 on a January closing basis		

Our interpretation: QE to infinity + loss of confidence in governments (collapse of socialism) + tech boom = shift from public assets to private assets & **hard assets**. Reflation game about to add fuel in coming years + Asian boom 2020+.

Current main signal: positive.

Our decision: we bought in July around 2.14, we added at 2.24 and we reduced at 2.63 in Dec. Now about to buy.

Failure, Stop-Loss: inability to hold above 2.27 could leave copper within a prolonged W-shaped bottoming process.

Target, Profit-Taking: 1st target of 2.60-2.80 already met; will be \$4+ beyond 2019/20.

If you start today: prepare to add/buy on lower side (around \$2.35-\$2.40).

Brent Future		Symbol: LCOc1	Last daily close: \$55.47
Time Horizon	Outlook/Forecast		Visibility
Medium-Term <6M	S/T correction still pending then more upside potential in 2017		Average
Long-Term 6M-2Y	January 2016 was major bottom. Significant top will form at \$67-\$75 in 2017/2018.		High Average
Secular Trend >2Y	Blocked within \$30-\$75 range for 4-6 years. Secular bottom in 2020 +/- 1 year		Good
Critical Level	Critical support level is \$48.00 on a January closing basis.		

Our interpretation: renewable energies cycle is on from 2014/2015 and will last for decades. Full-scale Tesla'ed-style future development. Possibly, small devices providing free energy beyond 2020. 2018/2019 war cycle could distort.

Current main signal: Positive since December/January. At technical risk if \$48.00 fails to hold.

Our decision: we bought from December and averaged down to low \$30s and will sell at \$67+ in 2017.

Failure, Stop-Loss: inability to hold above \$48.00 could derail uptrend.

Target, Profit-Taking: on sell signal, from \$65 and above (\$75?), in 2017.

If you start today: hold for now, wait on lower side (\$49) to buy/add and hold until target. **Not a core position.**

CRB Index Reuters	Symbol: .TRJCRBTR	Last daily close: 191.36
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	On significant intermediate rebound. Still on testing of 186 critical resistance.	Average
Long-Term 6M-2Y	January was major bottom. Significant top will form at 215/225 in 2017/2018.	Good Average
Secular Trend >2Y	Secular bottoming will form in 2020 +/- 1 year, then up over long-term	Good
Critical Level	Critical support/pivotal level is 186 on a January closing basis	

Our interpretation: QE to infinity + loss of confidence in governments (collapse of socialism) + tech boom = shift from public assets to private assets & **hard assets**. Reflation game about to add fuel in coming years.

Current main signal: moderately positive. About to turn positive when **186** is **firmly** passed (multi-month process).

Our decision: we bought from 170/175 Dec'15 low and averaged down to \$160s. We may sell at **215/225** in 2017.

Failure, Stop-Loss: inability to hold above **186** could leave price within a prolonged W-shaped bottoming process.

Target, Profit-Taking: on sell signal, from **215** and up to **225** by 2018.

If you start today: **buy a moderate L/T position now**, add when **186** is clearly defeated and hold till target.

CURRENCIES

EUR/USD	Symbol: EUR=	Last daily close: 1.0404
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	S/T consolidation now and intermediate bottom in Feb/March	Low
Long-Term 6M-2Y	Secular downtrend that has been playing out since 2008 should soon resume toward 0.85-0.98 into 2018 secular cycle-low.	Average
Secular Trend >2Y	Likely a secular low around 2018 . Currency crisis in 2018/2019	Low/High
Critical Level	Critical resistance level is 1.0939 on a January closing basis.	

Our interpretation: market has not yet fully priced Trump consequences. US dollar should lead as last game in town into **2018+ World Currency Crisis** but waiting on indicators to confirm soon.

Current main signal: **Negative**. **Resumption of primary downtrend requires some more technical evidence.**

Our intention: we have been negative on EUR/USD since 2008; early November was critical pivotal; we now prepare to sell once downtrend will be re-confirmed.

Failure, Stop-Loss: inability to hold below **1.0939** could turn main signal to neutral.

Target, Profit-Taking: unless negative signal is cancelled, target is **0.85-0.98** into 2018.

If you start today: **stay neutral; prepare to sell higher** as signal should confirm resumption of primary downtrend.

USD/CHF	Symbol: CHF=	Last daily close: 1.0269
Time Horizon	Outlook/Forecast	Visibility
Medium-Term <6M	An intermediate top will be reached in Feb/March 2017 below 1.07	Average
Long-Term 6M-2Y	The major/secular uptrend active from August 2011 should resume soon in direction of 1.07-1.17 into 2018 secular cycle-crest.	Average
Secular Trend >2Y	Likely a secular top in 2018. Currency crisis in 2018/2019 !!!	Low/High
Critical Level	Critical support level is 0.9931 on a January closing basis	

Current main signal: **Positive**. **Resumption of primary uptrend requires some more technical evidence.**

Our intention: we have been positive on USD/CHF since August 2011; we now prepare to buy if uptrend will be re-confirmed.

Failure, Stop-Loss: inability to hold above **0.9931** over near-term will turn main signal to neutral. Inability to hold above **0.9668** (Q1 level) could turn main signal to negative.

Target, Profit-Taking: unless main positive signal is cancelled, long-term projection is **1.07-1.17** into 2018.

If you start today: **now neutral; prepare to buy lower** as signal should confirm resumption of primary uptrend.

USD/JPY		Symbol: JPY=	Last daily close: 117.74
Time Horizon	Outlook/Forecast		Visibility
Medium-Term <6M	Overshooting. S/T correction pending anytime soon		Average
Long-Term 6M-2Y	Still under attraction of yearly pivotal line around 106.06. Primary uptrend may however resume soon.		Average
Secular Trend >2Y	Neutral signal. 2017 opening update will tell more.		Average
Critical Level	Critical support level is 111.25 on a January closing basis		

Our interpretation: currency war at its best.

Current main signal: Neutral. Now on renewed long-term upside pressures. A firm break of 111.02 and 111.25 can reactivate former secular uptrend (requires several months of price action).

Our intention: waiting on confirmation of renewed major & secular uptrend before buying.

Failure, Stop-Loss: inability to hold above 111.25 will leave main signal neutral. Decline below 106.06 could turn main signal to negative.

Target, Profit-Taking: if primary and secular uptrends resume, 135 will be bare minimum; 160+ is possible over L/T.

If you start today: stay neutral for now, do not chase, likely a new buying opportunity will form on lower side.

EUR/CHF		Symbol: EURCHF=	Last daily close: 1.0692
Time Horizon	Outlook/Forecast		Visibility
Medium-Term <6M	Magnetized by 1.0861 monthly pivotal line.		Good
Long-Term 6M-2Y	Extension toward 1.13-1.14 is unlikely. Cap is 1.1196 in Q1. Waiting on next technical incentive.		Average
Secular Trend >2Y	No visibility about how Swiss franc will behave in 2018/2019 currency turmoil		None
Critical Level	Critical pivotal/resistance level is 1.0861 on a January closing basis		

Our interpretation: under control of SNB until balance sheet implodes.

Current main signal: Neutral with a slight negative bias as price explores south of 1.0861.

Our intention: waiting on next clear technical incentive.

Failure, Stop-Loss: a prolonged price action below 1.0861 could trigger a sell signal. Under monitoring.

Target, Profit-Taking: no clear projection.

If you start today: stay neutral for now and expect price to remain close to 1.0861 for time being.

Bond Yields

US Tsy 10Yrs Yield		Symbol: US10YT=RR	Last daily close: 2.4540
Time Horizon	Outlook/Forecast		Visibility
Medium-Term <6M	S/T correction is underway then resumption of L/T upside pressures		average
Long-Term 6M-2Y	Yield should find a secular low by 2017 as cycles strongly show but technicals do not fully corroborate so far. L/T upside pressures are however building up.		Low
Secular Trend >2Y	A secular reversal should develop 2015 to 2017. Technical signal not full yet		Low
Critical Level	Critical support level is 2.17 on a Q1 closing basis.		

Our interpretation: When secular reversal signal will be in = new secular reflation trend + western socialism toward complete failure/bankruptcy + central banks losing control. Cycles strongly show secular turnaround is 2015-2017.

Current main signal: Neutral. Long-term bias is positive! Secular turnaround is getting closer.

Our intention: we are getting closer to full confirmation of secular reversal. When signal will be completed, yield will enter new secular bull trend.

Failure, Stop-Loss: if yield dives below 2.17 (Q1 closing level), downside risk will reopen.

Target, Profit-Taking: none.

If you start today: prepare to leave them in 2017 as L/T upside pressures are mounting.

Bund 10 Yrs Yield		
Time Horizon	Outlook/Forecast	Visibility
Symbol: DE10YT=RR Last daily close: 0.2690		
Medium-Term <6M	Short-term correction is over; moderately higher	average
Long-Term 6M-2Y	Yield should find a secular low 2016 to 2018 as cycles strongly tell but technicals do not corroborate so far.	Low
Secular Trend >2Y	A secular reversal should develop 2016 to 2018. No technical confirmation yet.	Low
Critical Level	Critical resistance level is 0.59 on a Q1 closing basis	

Our interpretation: market pays a premium to focus on “the return *of* my money rather than on the return *on* my money” + the safety to get back deutschmarks in case of European failure. **Cycles show secular upturning 2016-2018.**

Current main signal: Neutral. **Long-term bias is neutral.**

Our intention: unless major/secular reversal is triggered, we stay neutral as we have low visibility only. Presumably we will issue a strong sell signal on bonds once the major/secular signal will be displayed. Cycle-trough is 2016-2018.

Failure, Stop-Loss: as long as yield stays below 0.59 (Q1 level; on decrease q/q), downside risk dominates.

Target, Profit-Taking: none.

If you start today: you can **hold** on to those bonds but **prepare to leave them** as L/T upside pressures are heating up.

USD High Yield Corp Debt		
Time Horizon	Outlook/Forecast	Visibility
Symbol: .IBLUS0004 Last daily close: 253.87		
Medium-Term <6M	heading higher into 2017	Good
Long-Term 6M-2Y	Major topping formation is possible from H2 2017. Target is 280 by 2018.	Average
Secular Trend >2Y	No visibility about how JPMEG will behave during market turmoil 2018-2019.	None
Critical Level	Critical support level is 234 on a Q1 closing basis	

Current main signal: Positive since February 2016.

Our decision: we bought at 225 in mid-March for an advance toward 280 into 2018.

Failure, Stop-Loss: a weakness below 240 (January level; on the rise m/m) could trigger a sell signal.

Target, Profit-Taking: minimum target of 250 by Q1 2017 has been reached yet, next one is 280 by 2018.

If you start today: buy now and hold on till target. **Favour High Yield debt over Emerging debt**

Emerging Debt USD		
Time Horizon	Outlook/Forecast	Visibility
Symbol: .JPMEG Last daily close: 740.23		
Medium-Term <6M	upside is now moderate due to US dollar impact	Good
Long-Term 6M-2Y	Major topping formation is possible in 2017. New target is revised to 795.	Average
Secular Trend >2Y	No visibility about how JPMEG will behave during market turmoil 2018/2019.	None
Critical Level	Critical support level is 695 on a Q1 closing basis	

Current main signal: Positive since February 2016. **Increasing volatility due to US dollar strengthening.**

Our decision: we bought at 692 in mid-March for an advance toward 795 by 2018.

Failure, Stop-Loss: a weakness below 728 (January level; on the rise m/m) could trigger a temporary sell signal.

Target, Profit-Taking: minimum of 775 by Q1 2017 has been reached yet, next one is 795 by 2018.

If you start today: hold on till target by 2018 or **buy High Yield Debt for new position. Higher volatility ahead!**

Opportunities: we got early 2016 a long-term buy signal on **FCG, XOP and OIH (oil and gas companies)**. All of them have been pressing higher against their monthly pivotal line for many months; XOP and OIH confirmed their breakout and FCG is about to do so over short-term. **Linked to oil/gas price development.**

REMX ETF (rare earth mining companies; 17.23 ex-div) posted a long-term buy signal and requires several months to firmly get through monthly pivotal line (16.20). **Best long-term buying opportunities always start with a slow-motion price development.**

We have very strong leading signals that agriculture/grain prices will be on fire into 2018. It is only a matter of time before prices will soar. **We will consider grains on a selective basis (corn, wheat, soybean ...).** Waiting on next buying signals, presumably at some point during 2017. **Prepare to buy – soybeans first, then corn and finally wheat.**

We also monitor **uranium mines (tracker URA last 13.27 ex-div)** as a major bottom may form over M/T; **critical monthly pivotal line at 13.53** has been capping price since April. **We observe that long-term upward pressures are building up.** **Will very likely trigger a L/T buy signal in 2017.**

We bought ETF tracker ROBO (last 28.99) at 28.20 as **ROBO Global Disruptive Technology PR Index (.RUPT)** will follow leading US tech markets on the rise.

Some indexes in the **renewable energy technologies** sector are on monitoring for a possible major bottom **in 2017** – such as solar energy for instance (ETF TAN). **Ecology started a master multi-decade positive cycle from 2014/2015.**

We got a long-term buy signal on **coffee (future KCC1 \$137.40; tracker JO)** which formed in Jan/Feb 2016, with long-term upside potential toward **\$200+** into 2017/2018. **Despite sharp correction, main trend remains positive.**

Sincerely,

Nils Baranger
